Rugged. Reliable. Versatile.

KODIAK Tundra Interior

The Tundra base interior is lightweight, yet it can withstand the heavy usage typically seen from charter operations that carry a combination of passengers and freight. The leather seats are easily removed and stowed for effortless conversion between passengers and freight. The floor is protected with a layer of rubber compound which provides a rugged anti-skid surface. Passenger Service Units provide fresh air vents and reading lights at each seat. Headset jacks are located at each passenger seat to allow everyone on board access to the aircraft's intercom system.

The Interior Package comes in warm beige or cool gray and includes your choice of seat color and lower interior panel color. The standard interior comes with:

- 2 Tundra crew seats
- 4 Tundra passenger seats
- Slip-resistant flooring
- 8 Passenger headset jacks

- 8 Passenger PSU vents and reading lights
- Full cabin ventilation control system
- 2-place oxygen system for crew

Other features include:

- Upgraded cockpit seats with an improved headrest and center pedestal closeouts
- Refined headliner gives more open feel
- Composite panels contribute to overall weight reduction and improve the KODIAK's useful load
- Optional additional passenger seats
- Variety of available options including external baggage compartment, TKS ice protection, air conditioning and additional avionics equipment

The KODIAK is rugged, reliable and ready when you are!
